CONCLUSION:

In this practical, the Project Title was initiated by clearly defining the scope, planning key pages, and designing consistent HTML skeletons to support a scalable and structured website layout. This foundation ensures ease of styling with CSS and integration with JavaScript or backend systems in future development phases.

No.	Aim of the Practical
2.	Design a fully responsive layout for the portal home, about, and registration pages using CSS and Flexbox/Grid. <u>PROGRAM CODE:</u> 1. CONCLUSION:

In this practical, fully responsive layouts were created for the Home, About, and Registration pages using CSS Flexbox and Grid. This ensures a modern and professional look for any web portal.

No.	Aim of the Practical
3.	Create a user registration page with frontend validation using HTML5 and JavaScript. <u>PROGRAM CODE:</u> <pre> document.getElementById("registerForm").addEventListener("submit", function (e) { e.preventDefault(); const name = document.getElementById("name").value.trim(); const email = document.getElementById("email").value.trim(); const password = document.getElementById("password").value; const confirmPassword= document.getElementById("confirm- password").value; // Name validation if (name.length < 3) { alert("Please enter a valid name (minimum 3 characters)."); return; } // Email or Mobile validation const emailRegex = /^[^\s@]+@[^\s@]+\.[^\s@]+\$/; const phoneRegex = /^[6-9]\d{9}\$/; if (!emailRegex.test(email) && !phoneRegex.test(email)) { alert("Please enter a valid email or mobile number."); return; } // Password strength validation const passwordRegex = /^(?=.*[A-Z])(?=.*\d)(?=.*[@\$!%*?&])[A-Za- z\d@\$!%*?&]{8,}\$/; if (!passwordRegex.test(password)) { </pre>

```
    alert("Password must be at least 8 characters long and include at least one
uppercase letter, one digit, and one special character.");
    return;
}
// Confirm password match
if (password !== confirmPassword) {
    alert("Passwords do not match.");
    return;
}
// Success
alert("Registration successful!");
window.location.href = "login.html";
});
```

OUTPUT:

CONCLUSION:

In this practical, we successfully created a user registration page that includes frontend validation using HTML5 and JavaScript. HTML5 input attributes like required, type, minlength, and pattern provided basic validation, while JavaScript was used to add custom checks such as password match, email format, and real-time error messages. This enhances the user experience, prevents incorrect data submission, and reduces server load by catching errors early at the client side.
